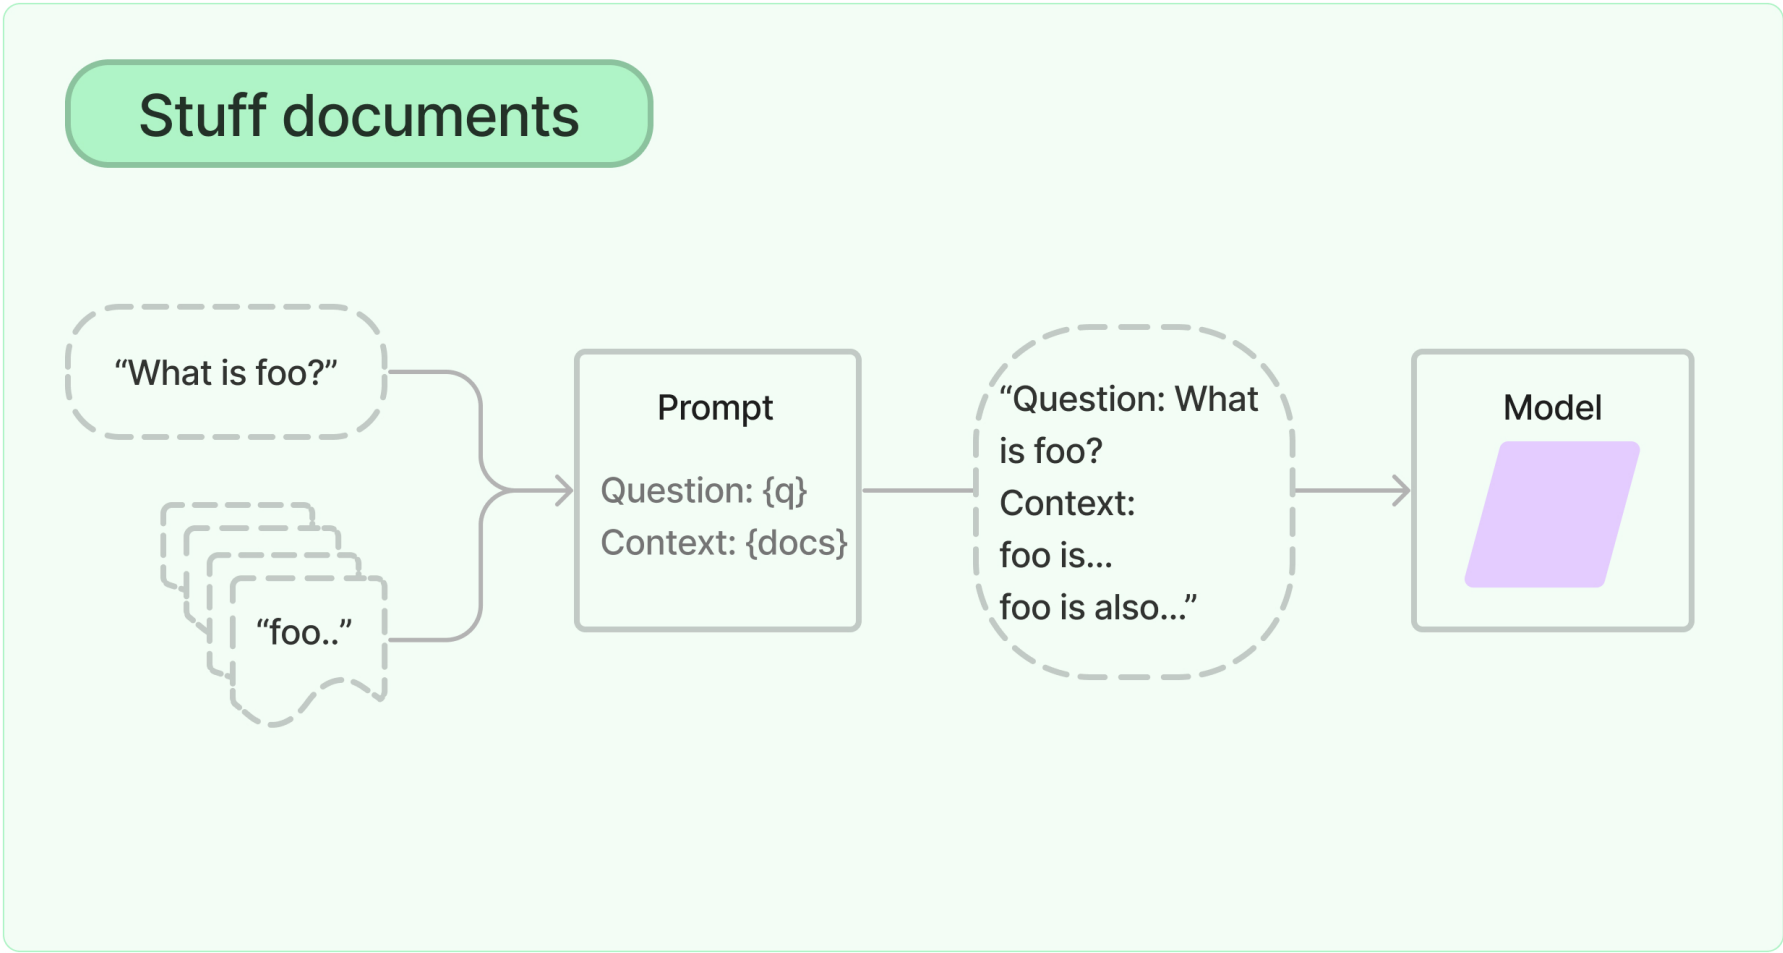
Stuff

The stuff documents chain ("stuff" as in "to stuff" or "to fill") is the most straightforward of the document chains. It takes a list of documents, inserts them all into a prompt and passes that prompt to an LLM.

This chain is well-suited for applications where documents are small and only a few are passed in for most calls.



Stuff documents
“What is foo?”
“foo..”
Prompt
Question: {q}
Context: {docs}
“Question: What is foo?
Context:
foo is...
foo is also...”
