API chains

APICChain enables using LLMs to interact with APIs to retrieve relevant information. Construct the chain by providing a question relevant to the provided AP...

Retrieval QA

This example showcases question answering over an index.

Conversational Retrieval QA

The ConversationalRetrievalQA chain builds on RetrievalQAChain to provide a chat history component.

Using OpenAI functions

This walkthrough demonstrates how to incorporate OpenAI function-calling API's in a chain. We'll go over:

SQL

This example demonstrates the use of the SQLDatabaseChain for answering questions over a SQL database.

Summarization

A summarization chain can be used to summarize multiple documents. One way is to input multiple smaller documents, after they have been divided into ...
